MORTUARY REPORT,

FOR THE YEAR BEGINNING 1ST FEBRUARY 1852.

THE Deaths registered during the Statistical Year which closed on 31st January last were on the whole fewer than in 1851, but setting aside Epidemic Diseases, the mortality on the island was greater than it had been in any of the preceding four years.

2. The total reported deaths were 13763, or, exclusive of still-born, 13511, which was less by 978 than in the year 1851. In comparing the deaths of the last two years, it is seen that in 1852 there were 2885 fewer from Cholera, while there were 490 more from Small-pox, the total loss of life from this avoidable disease being 1007.

3. From all causes, exclusive of Epidemic Diseases and Still-born, there was an increase of 1409, which was owing chiefly to an increase of 1124 under the head of Fever, and of 232 under that of Respiratory Disease. Under some other headings, also, there was an increase, but of smaller amount, as in Classes IX, X, XI, XII, and XVI, while there was a decrease of 55 under Disease of the Alimentary Organs, and a smaller decrease in Classes V, XIII, XIV, and XV.

4. The information registered was obtained in greater part orally from the friends of the deceased, the written reports being in number but one-eleventh of the whole. The want of precision in determining the exact cause of death, that must thus exist, and the fact that it is mostly reported in general terms, preclude satisfactory minute investigations on this point in most of the classes.

5. In the last Annual Report attention was directed to the great number of deaths by Drowning that were registered; and now it is shown that in last

year there were 47 deaths from that cause, 8 of which were by drowning in the sea, and 39 by drowning in tanks, wells, and pools. The present state of these reservoirs, and of the many unfenced pools, adds to the mortality not merely by occasioning accidental deaths, but it appears to do so also by inducing Suicides that would not otherwise take place. This inference is drawn from a review of the instances of self-destruction reported during the five years 1848—1852 inclusive, of which the following is an abstract:—

Suicides in Bombay in five years, 1848—1852.

Means used.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	January.	Total.
Drowning in Tank, Well, Pool	1	2	..	2	6	9	11	11	3	6	1	52
Drowning in Sea	3	1	4
Poisoning	1	3	1	3	2	4	..	1	3	2	1	23
Hanging	1	1	..	2	..	2	2	..	8
Throat-cutting	3	1	2	1	1	8
Gun-shot	1	1	1	1	..	4
All means.	4	6	6	4	6	9	13	13	15	9	11	3	99
Drowning in Tank, Well, Pool	1	2	..	2	6	9	11	11	3	6	1	52
Other means.	4	5	4	4	4	3	4	2	4	6	5	2	47

6. In this table it is seen that the suicides effected by other means than drowning in fresh waters were almost equally distributed among the different months, and that during the months when water is usually abundant in the reservoirs and pools, the total numbers were increased. It is also seen, that in the months when the wells, &c. are mostly empty, other means of self-destruction were not substituted for drowning, but that those who might at another season have embraced death, then resigned themselves to life.

7. The number of Still-born registered as brought to the funeral places during the year was 252, which bears but a very small proportion to the total deaths, and is much less than would most probably be registered, were the Police required and authorized by law to prevent domiciliary interments.

8. The preponderance of male over female deaths was as usual great, the numbers being, exclusive of Still-born, 7312 and 6199, or as 118 to 100. The proportions between the two sexes during the past five years are seen by the tables to have fluctuated between 115 and 132½ males, to 100 females.

9. The Caste groups bear almost the same relative proportions as in the preceding year. A list of the names of the Hindoo Castes that were registered during 1852 is appended. The *Booroods* are not classed with the *Outcastes*, as was proposed, because it has been ascertained that they are not treated as such in Bombay by the higher Castes, and that they are allowed admission into the sitting and sleeping apartments of even Brahmans, who do not consider themselves to be defiled by their approach. Owing to the unovercome difficulty of fixing the right order of precedence of the Castes, an alphabetical arrangement has been followed.

10. Of the 13763 dead, including Still-born, 7532 were reported to have been born in Bombay, and 6210 elsewhere, and of 21 the birth-place was unknown. Of the same there were 3078 stated to have been of families belonging to Bombay, 10667 of such as belonged to other places, and 18 whose families were unknown.

11. The bodies of 9344 were buried, 3667 were burnt, and 752 were exposed to vultures.

12. The Abstracts of Meteorological Observations received from the Magnetic Observatory show that the mean Pressure of the Air during the year was 29.806 inches, the mean daily range .116, and the annual range .639; that the mean Temperature of the Air was 80°1, the mean daily range of Thermometer 12°1, and the annual range 38°5; that rain fell on 99 days, and to the amount of 69.26 inches. The Meteorological Abstracts state the deduced mean Dew Point to have been 70°9, and the mean Humidity of the Air 91 per cent. These Hygrometric results from the observations of the Moist Bulb Thermometer are obtained, it is believed, by the aid of tables formed at the Observatory from those calculated by Major Boileau. The Humidity is in excess of what would be found with the tables of Mr. Glaisher, of the Royal Observatory, Greenwich.

A. H. LEITH.

Bombay, June 28th, 1853.
